

Due to the low height of the HFX mini case, you have to use riser cards. If you want to install a TV or Sound card with PCIe1x, then you have to choose the right motherboard. Some motherboards do not have the PCIe1x slot in the right position.

Your motherboard must have the PCIe1x slot in the 2nd row! Otherwise you cannot install the PCIe1x riser.

If the PCIe1x is not in the 2nd row, you can not use the PCIe1x riser.

If the PCIe1x is in the 1st row, you can not use the PCIe1x riser.

If the PCIe1x is in the 2nd row, you can use the PCIe1x riser.
